

TALLMAN GEOLOGICAL CONSULTING LTD.

I have contracted the services of Tallman Geological Consultants since 1991.

Guy Tallman started out as a Well-site Geologist for Tri Link Resources who were drilling vertical wells in S.E. Saskatchewan, and then started drilling horizontal wells in the early 1990s.

Guy provided exemplary services as a Professional Well-site Geologist who understood what the client wanted. Through his vast experience working in the Williston Basin and his detailed knowledge of many different geological formations, Guy is able to advise the client when required as to different well-site geological and drilling procedures. He always has the best interests of the client in mind and provides excellent communications between the drilling rig and the Company geologist.

Guy has, over the years, expanded his group of well-site geologists to keep pace with the active drilling programs that the various oil and gas companies have implemented. Each well-site geologist with Tallman Geological Consulting is personally trained by Guy Tallman and he has instilled in all the geologists, the same caring, disciplined, professional attitude and approach of knowing what the client requires and providing it 24/7. The well-site geologists never hesitate to contact the Company geologist for clarification and understanding of what is required.

The well-site geologists implement the Company plan and provide the Directional Drillers with information that is required, never hesitating to “go the extra mile” in achieving this.

Tallman Geological Consulting has developed into a very experienced group of Professional Well-site Geologists familiar with the geology of Saskatchewan, Manitoba, Alberta and North Dakota, and are at the top of their peer group.

They also provide other geological services such as sample and core examinations and descriptions in the Government facilities in Regina, Calgary and Fort St. John.

I have no hesitation in highly recommending Tallman Geological Consultants for any well-site geological services.
